

## Casing Head Housings

**Casing Head Housing:** The adapter (usually flanged) between the first casing string and either the BOP stack (during drilling) or the next wellhead stage (after completion), and allowing suspension and sealing of the secondary casing string

### Standard Features

- straight bowl design with a 45° landing shoulder
- accepts automatic and non-automatic sealing casing hanger as well as mandrel type casing hanger
- available with threaded, slip-on weld (optional: shop welded casing pup) or slip-lock bottom connections
- available with line pipe threaded and studded side outlets; studded outlets are threaded for valve removal plugs
- can be provided with lock-down screws for retention of wear bushing
- can be provided with a landing base
